Scale roadmap

This page is current. The remaining sequence and blockers are in `docs/backlog-graph.typ`; the current state is `docs/now.typ`; the completed sequence and estimation record is `docs/roadmap-archive.typ`.

Where to look

Kind	Where
Current state	`docs/now.typ` — the session-start brief
Remaining order	`docs/backlog-graph.typ` — R0–R13 and their blockers
Completed history	`docs/roadmap-archive.typ` — the handoff archive
Decisions	`docs/decision-index.typ` — every decision by number
Specification status	`docs/specification-status.typ` — generated from `docs/architecture.edn`
Line counts	`docs/line-counts.typ` — generated by `just line-counts`

Current sequence

The ground-up order is R0–R13 in `docs/backlog-graph.typ`. Slices 1–6 and R3, R4, R6, R8, R10, R11, R12, and R13 are landed. The remaining work is release-time verification, not an open development slice. The graph, not this paragraph, is the authority.

Read budget

Read `docs/now.typ` first. Then read the specification section, the feature document, and the decision-index row for the active decision. Use `doc_get_section` for one decision or archive section. Do not read `docs/decision-records.typ` or `docs/roadmap-archive.typ` end to end; they are evidence, not a briefing.
